

# The Titan SGS™ Stapler and Your Sleeve Gastrectomy

Choosing surgery is a big decision. We want you to feel confident, safe, and informed. That's why we use the **Titan SGS™ Stapler**, a device designed **specifically for sleeve gastrectomy**.

## ■ Why This Matters for You

- Made for sleeve surgery only – unlike older staplers, this one is purpose-built for your stomach's anatomy.
- One smooth step – the stapler creates your new stomach sleeve in a single, gentle firing that takes less than a minute.
- More consistent results – because it's done in one step, there's less chance of twists, kinks, or uneven healing.

## ■ Benefits Patients Have Experienced

- Shorter surgery time – less time in the operating room.
- Faster recovery – many patients go home the next day.
- Fewer readmissions – lower chance of needing to come back to the hospital.
- Less heartburn and nausea – the sleeve shape reduces common post-surgery issues.

## ■ Confidence in Your Care

- More than 15,000 patients have already had sleeve surgery with the Titan SGS™.
- Backed by studies showing shorter recovery and improved comfort.
- Chosen by surgeons who want to give you the safest and most modern care.

■ With the Titan SGS™, you can feel confident that your surgery is being performed with the **latest technology, designed just for you**.
